Lamello Tools P-System Wood Joining

Thank you for shopping with us! **Connect every angle and save time** The Lamello P-System is an innovative and time-saving joining system for wood and wood composites. The Clamex P-14, Tenso P-14, and Divario P-18 connecting fittings enable flexibility, creativity, and efficiency throughout the design, manufacturing, transport, and assembly process. The positive-locking P-System groove forms the foundation, which is milled into the workpiece using the Zeta P2 biscuit joiner or on a CNC machining center. The P-System connectors are inserted by hand into the P-System groove in seconds and is securely anchored. The wide range of connectors enables almost any application, many angle connections, and a variety of functions such as detachable, invisible, or slide-in joints.
