### FS Tool Industrial Quality Segmented Hogging Units

Edge of Arlington offers free shipping in the United States when you choose flat rate shipping

FS Tool's offering of industrial saw blades represents the state of the art answers for today's woodworking cutting applications on North American and European machinery. Our product offering is the largest of its kind. Each saw blade has been developed to fulfill a specific cutting application. Each model has been developed with its own grades of materials (carbide and saw plate), its own cutting geometry (grind, hood angle, kerf), and its own operational enhancements (copper noise reducing plugs, cooling slots).

- Commitment to Development: meets the challenge of today's applications & materials
- Commitment to Quality: personal checking of saw blades at each step in our highly-automated manufacturing process
- Commitment to Value: competitive in a demanding and dynamic industrial marketplace

#### Design:

- Hogger body made of light alloy equipped with 4 or 6 segments and 1 saw blade; all TC-tipped, replaceable and resharpenable
- Standard chipping width 30mm; wider chipping widths in multiples of 30mm can be achieved by adding multiple elements, which must be specified when ordering

#### Application:

- For chip-free sizing of panel materials on double-end tenoners and trimming machines
