Cut a quarter-round shape bound by fillets, known as a bead, in one pass. The width of one fillet is set by the pilot bearing size, while the other is controlled by the depth of cut. A beading bit can be transformed to a corner rounding bit by changing the bearing (and vise versa).

Replacement bearing 47702

Replacement bearing 47702

Warning: Maximum RPM = 18,000. Use in a table-mounted router—not for use in a handheld router.

Not guaranteed due to extreme diameter and radius. For best results it is recommended to use a smaller radius bit or chamfer the material prior to using these large radius tools. Tool life will be prolonged and a smoother finish will result.
