Material Finish-Top: Excellent

Material Finish-Bottom: Poor

Downcut routers produce the best finish to the top of the material. Chips flow in a downward direction.

Spiral flute router bits should only be used in automatic feed operations. They are good for use on all materials.

2 flute routers work well with harder materials, providing an excellent finish to the material.

Endmill Points are most often found on 3 and 4 flute routers. They are good for achieving a smooth finish on a flat bottom surface, and are commonly used in the plastic routing industry.
