Item #97-361, Diablo 3-Piece Premier Adjustable Ogee Door Edge Router Bit Set \$268.89

Thank you for shopping with us! Freud's innovative one-solution Door Edge Router Bit Set includes all router bits (Premier Adjustable Rail and Stile, No-Lip Door Edge, and Finger Pull Door Lip) needed to tackle common cabinet door making challenges—like tear-out, splintering, and uneven profiles—with patented technology and precision engineering. Featuring TiCo™ Super Density Carbide for razor-sharp edges and unmatched durability, these bits deliver smooth, clean cuts and professional-quality results. The patented design of these bits produces extra-strong, long tenon joints, ensuring superior strength and flawless fits for frame-and-panel doors. Adjustable cutters allow easy customization for various panel thicknesses, offering versatility for any woodworking project. Whether crafting cabinet doors, frames, or decorative panels, Freud's Premier Rail & Stile Bits provide seamless joints and finishes with minimal sanding or rework—saving time and elevating craftsmanship. Freud-made TiCo™ Hi-Density Carbide with Titanium maximizes cutting life and material finish. Patented extended tenon capability for milling extra-strong long tenon joints. Incorporate optional cutters to produce double-sided doors, or the optional cutter for glass and screen door construction. Perma-SHIELD® non-stick coating reduces friction and resin adhesion while preventing corrosion for less work and cleaner cuts. Tri-metal brazing consists of copper sandwiched between two layers of silver alloy to create a stronger, more impact-resistant bond between the carbide and the bit. Kickback-reducing design restricts the amount of material that can be fed, reducing the effects of kickback from overfeeding. Premier Adjustable Ogee Door Edge Router Bit Set features (1) Premier Adjustable Rail & Stile Ogee bits (99-761), (1) 1-3/4" No-Lip Door Edge bit (99-063), and (1) 1-3/4" Finger Pull Door Edge bit (99-064). The 1/2" shanks allow woodworkers or professional job site installers to use a handheld router or a collet table router. Ideal for solid wood, wood-based sheet goods (plywood, MDF, Melamine coated chip board), laminate (ex: Wilsonart, Formica) Includes: 99-761 99-063 99-064
