Item #ML-25580AB, Tenryu Mel-Pro Series Melamine & Veneer-Faced Plywood Saw Blades
$153.00

Thank you for shopping with us!

Table Saw. Miter Saw.

The ultimate melamine and veneer-faced plywood cutting blade.

The Mel-Pro series is a complete line of blades that solve problems associated with cutting melamine and other laminated wood products. Additionally, veneer-faced plywood can be cut without splintering at more reasonable feed speeds than in the past.

Finer Cuts—precision-ground carbide teeth set on hand-tensioned tool steel bodies produce finer cuts without chipping and " bottom-side blowout."
Quieter—patented resin bond-filled expansion slots effectively absorb vibration and reduce noise.
Longer Life—High-grade, extra hard, micro-grain, anti-corrosive carbide teeth fight both chemical and abrasive wear to remain sharp longer.

There are a lot of blades on the market that can cut melamine but only the Tenryu Mel-Pro can cut it chip-free, quieter, easier, and longer.

Numerous requests for a better melamine blade prompted Tenryu to spend over a year of research and development to bring you the world's most advanced melamine cutting blade. The Mel-Pro features a fully hardened, expertly tensioned tool steel body that absorbs impact, remains flat and true, and resists excess heat buildup. The Mel-Pro's exclusive red bond, resin-filled expansion slots absorb vibration, reduce heat, and permit the blade to run quieter than any other brand. The thin kerf, mirror-like grind on the super hard, specially designed carbide tip allows for lighter cuts and reduces friction heat buildup. The bottom line is **your bottom line** will be better when you reduce scrap, reduce sharpening costs, and reduce noise in your shop with Mel-Pro blades.

Though Mel-Pro Blades are typically used on table saws, they also perform spectacularly well on Miter and Slide Miter Saws.

See our Tenryu Industrial Blades for extra heavy duty blade choices.

SPECIFICATIONS	
Grind	ATAFR

SPECIFICATIONS	
Kerf	0.118
Manufacturer	Tenryu
Teeth	80
