Item #SBOX8, Freud Box Joint Cutter Set \$101.63

Thank you for shopping with us!

Application: Use on all Table Saws for Cutting Grooves to Create Box Joints in Softwood or Hardwood

Freud has developed a method of creating perfectly square, flat-bottom box joints on a table saw without using a dado set or saw blade. The SBOX8 Box Joint Cutter Set makes box joint construction easy, producing strong, accurate joints without shims or awkward adjustments. This patent pending innovation enables users to produce perfectly square, precise box joints quickly and cleanly the very first time—and every time. Includes instructions for making box joints and building a box joint jig. The set is easy to use. Simply install the two 8" diameter, 5/8" arbor blades on a table saw with the blades back to back for 1/4" box joints or face to face for 3/8" box joints. Make test cuts and sample joints with your new SBOX8 before using it on your first project. Whenever possible, plan projects to use stock with a width that is an even multiple of either 1/4" or 3/8", resulting in joints with all pins and tails at full width.

SPECIFICATIONS

Manufacturer	Freud Tools
Diameter	8 in
Arbor	5/8 in
Hook Angle	20 deg

SPECIFICATIONS

Teeth	20
Thickness	1/4 in groove & 3/8 in groove (width of cut)
