Item #TB86401, Amana Tool Carbide-Tipped Thin Kerf Trim 8 Inch Dia x 64T TCG, 10 Deg, 5/8 Bore **\$89.74**

Thank you for shopping with us! Thin kerf blades require less power because they have thinner plates and narrower tips. For that reason, this trim blade is ideal for jobsite table saws and the various miter saws. Available in either alternate top bevel grind for cutting hardwood, softwood, and plywood, or available in triple-chip grind for chipboard and laminate-covered material. Also suitable for cutting thin Plexiglas®, masonite, and plastics. Use of stabilizers is recommended when cutting stock over 3/4" thick.
